

HORWIN presents new vehicle in L3e class at the EICMA motorcycle trade fair

World premiere for the sporty HORWIN SK3 electric scooter

The electric two-wheeler manufacturer HORWIN is expanding its range with the SK3. The new e-scooter is presented for the first time worldwide at **EICMA 2021**. Europe's largest motorcycle fair takes place from November 23 to 28, 2021 in Milan (Italy).

The sporty light motorcycle in the L3e class drives up to **90 km/h**. This is ensured by a center motor with a maximum power of 6.2 kW. The battery (72 V / 36 Ah) has a range of up to **80 km** (at a speed of 45 km/h). A full charge takes just under five hours.

With its clear, angular lines, the SK3 differs from the round shapes of the HORWIN EK3 and EK1 e-scooters. So he is tapping into a new target audience. There are three **colors** to choose from: metallic blue, metallic grey and black.

The SK3 is **equipped** with numerous technical refinements. These include all-round LED lighting, a clear display, cruise control and a battery-, FOC energy- and CBS brake-management system. There is a helmet storage compartment under the seat, which can optionally be filled with a **second battery** to double the range to up to 160 km.

The HORWIN SK3 will be available in stores in Europe **from the beginning of 2022**. The recommended **retail price** (including VAT) will be € 3,990. Shortly thereafter, the SK3 will be followed by its little brother **SK1** in the L1e class.

The new **EK delivery scooter series** EK3 DS (L3e) and EK1 DS (L1e) are also presented for the first time at EICMA. The stylish delivery vehicles can be equipped with a second battery and have a range of up to 176 km (EK1 DS+) or 168 km (EK3 DS+).
